

To: Whom It May Concern

Date: 18-Aug 2024

I am writing this testimonial to provide a reference for Thaddeus Chua, who was under my supervision as an Intern at SIA Engineering Company (SIAEC) from 13th May 2024 to 2nd August 2024.

During his 12-week internship program, Thaddeus was attached to the Continuous Improvement department under Engine Services Division. He was assigned to assist the team on running Value Stream Mapping workshop for Trent XWB Engine Joint with the objective to streamline processes as well as helping the operations to design the materials work flow for one of the new CFM LEAP-1A Service Bulletin campaign – Reverse Bleed System (RBS), using the application of LEAN methodology.

Also, Thaddeus has helped to design and create a digitalized Engine Dashboard that displays the work progress status using Microsoft Access as well VBA programming. While designing the layout of dashboard, he took the initiative in communicating with various parties in understanding the operation process as well as gathering the user's feedback and requirements.

Throughout his course of internship, Thaddeus has demonstrated his attentiveness to details, showing his competency in his areas of work with commitment and diligence by fulfilling his task with minimal supervision.

Given his abilities, I believe Thaddeus will be an asset that value adds to the business organization he works with in the future.

Sincerely,

Tan Weiling
Manager, Operation Support
Engine Services Division
SIA Engineering Company
